

# SMART Digital Twin for Next Generation Ports

Chew Ek Peng, PhD, CEng  
Director, Centre of Excellence in Modeling and Simulation for Next Generation Ports (C4NGP)  
Department of Industrial Systems Engineering and Management  
National University of Singapore

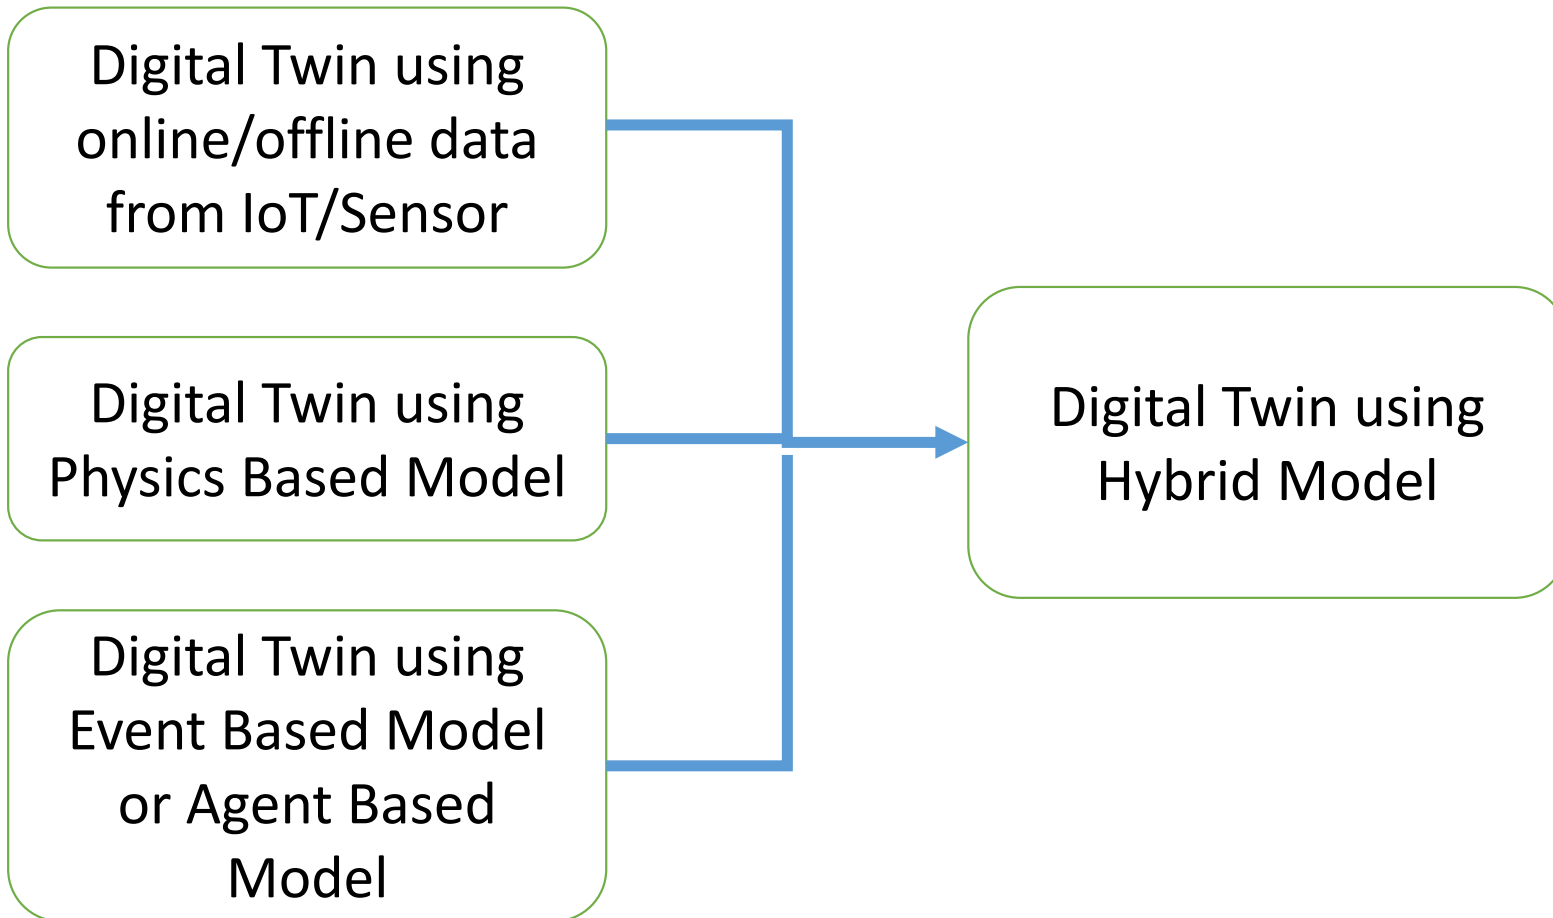

This centre has been made possible by the funding support from the Singapore Maritime Institute

# DIGITAL TWIN

**Digital** manifestation of the **Physical** Systems

# Approaches of Creating a Digital Twin

# Creating a Digital Twins for Systems

- Purpose driven
- Level of Fidelity
- Computing feasibility

# Creating a Digital Twins for Systems of Systems

Stage	Activity	Purpose	Fidelity Level	Remark
1	Design	Evaluating/Optimizing design and resource planning	Low/Medium or Mixed	A prototype even before the physical version is built Offline
2	Planning and Operations Strategy	Evaluating/Optimizing Operations and Risk Management Strategy	Medium/High or Mixed	Reuse the prototype by increasing the fidelity level Offline
3	Daily Operations	Real time control and exception management	High/Very High or Mixed	Online: Sensors, IOTs, TOS, etc

# Smart Digital Twin

```
graph TD; SDT[Smart Digital Twin] --- V[Visualization]; SDT --- C[Connectivity]; SDT --- A[Analyzability]; SDT --- G[Granularity];
```

## Visualization

For Better Human Perception

- Charts
- 2D/3D Animation
- VR/AR

## Connectivity

Interoperability

- Simple UIs
- Comm with different systems
- Sync with IoT

## Analyzability

Analysis for Decision Making

- Simulation
- Optimization
- Sim - Analytics

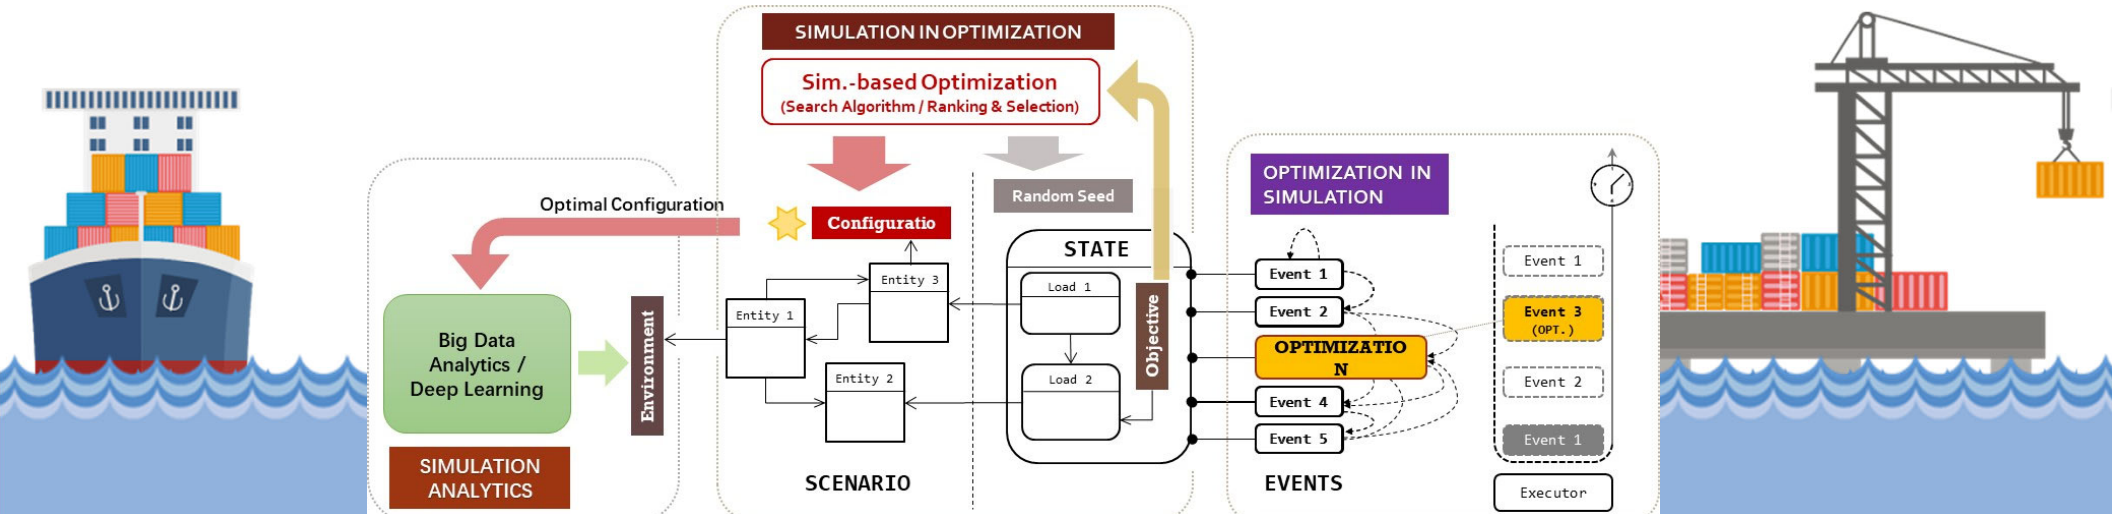

## Granularity

Fidelity Level of the Model

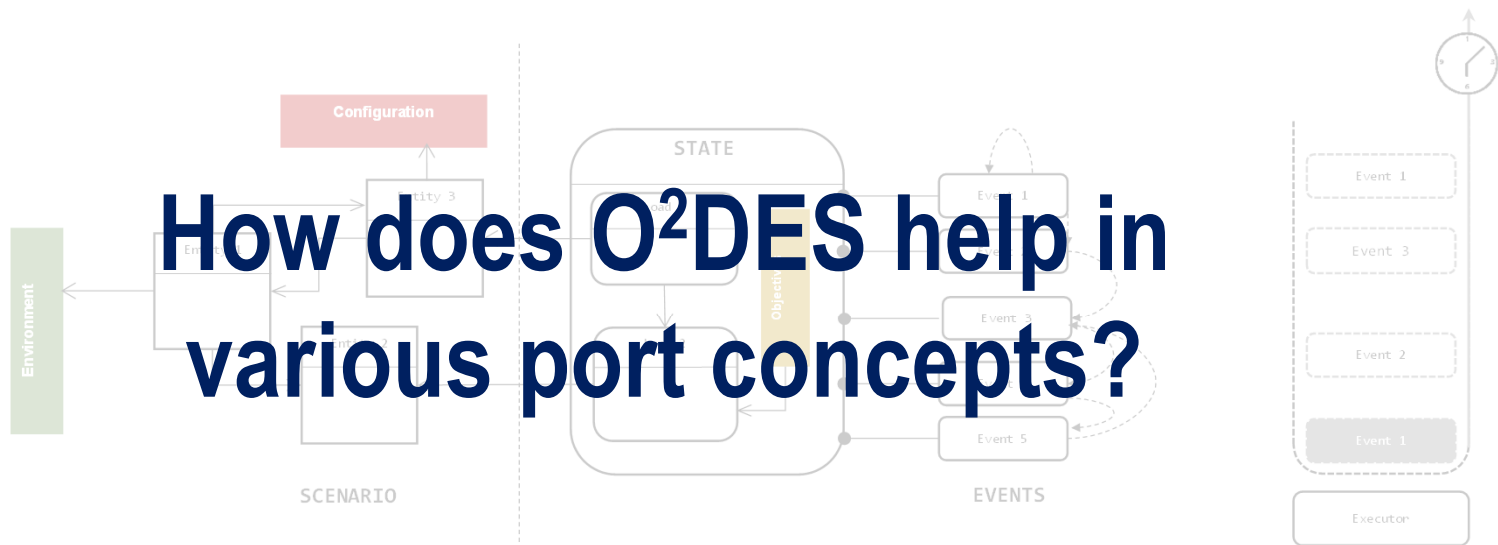

- Conceptual
- Planning
- Operational
- Exact Protocols
